

MOSTAFA AHMED ABDELAAL

Junior AI Engineer / AI Engineer Intern

✉ mostafa.ahmed.abdalal2005@gmail.com ☎ +201226327653 📍 Giza, Egypt 🌐 [GitHub](#) [LinkedIn](#)

SUMMARY

Computer Science student specializing in Artificial Intelligence, with practical experience in Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), and Generative AI application development. Built and deployed end-to-end AI solutions using modern frameworks such as LangChain, vector databases, and advanced prompting techniques. Experienced in developing intelligent document QA systems, AI assistants, and knowledge retrieval applications. Seeking an AI Engineer Intern or Junior AI Engineer role to contribute to real-world AI products while expanding expertise in LLMs and AI systems engineering.

TECHNICAL SKILLS

Programming

Python, C++, SQL, Git & GitHub

Machine Learning / Deep Learning

Supervised & Unsupervised Learning, Model Evaluation, ANN, CNN, RNN, LSTM, GRU

Deployment / Backend

Streamlit, FastAPI, REST APIs, CRUD Operations, Streamlit Community Cloud

Math & AI Foundations

Probability & Statistics, Linear Algebra, Machine Learning Mathematics

Deployment / Backend

Streamlit, Streamlit Community Cloud, FastAPI (API development, CRUD basics)

Generative AI & LLMs

LLMs, Prompt Engineering, Hugging Face Transformers, RAG, LangChain, Embeddings, Vector Databases (ChromaDB), AI Agents

Libraries & Tools

NumPy, Pandas, Matplotlib, Scikit-learn, TensorFlow / Keras

PROJECTS

AI-Powered Multilingual Translation System

05/2026

- Built a neural machine translation web application using HuggingFace Helsinki-NLP models with Gradio interface.
- Integrated **HuggingFace Inference API** for real-time translation across multiple languages.
- Implemented automatic language detection using langdetect to identify input language dynamically.
- Designed a translation pipeline supporting direct and pivot translation (source → English → target).
- Developed an interactive UI with status tracking, input/output synchronization, and copy-to-clipboard functionality.
- [GitHub](#) | [DemoLive](#)

PDF Question Answering System using RAG (LLMs)

11/2025

- Designed an interactive system that allows users to upload PDF documents and ask questions using Retrieval-Augmented Generation (RAG).
- Integrated Large Language Models to generate accurate, context-aware answers.
- Technologies: Python, Streamlit, LangChain, Chroma, FastEmbed, OpenAI LLM
- [GitHub](#) | [DemoLive](#)

End-to-End NLP Summarization Web App

02/2026

- Built an abstractive text summarization web app using Streamlit and Hugging Face Transformers.
- Used **facebook/bart-large-cnn** pre-trained model for generating high-quality summaries.
- Implemented custom preprocessing pipeline including sentence segmentation and chunking to handle long documents beyond model limits.
- Managed Streamlit session state and optimized inference using caching for better performance.

Real-Time Speech Recognition System (Speech-to-Text)	12/2025
- Developed a web-based speech-to-text system using Python, Streamlit, and SpeechRecognition. - Utilized Google Speech Recognition API to convert Arabic speech (Egyptian dialect) into text. - Handled audio preprocessing including ambient noise calibration and real-time microphone input streaming. - Built an interactive UI with dynamic visual indicators for recording state and user feedback. GitHub	

ACADEMIC HISTORY

Bachelor of Science in Computer Science (Artificial Intelligence), <i>Arab Open University (AOU)</i>	2027
--	------

CERTIFICATION

AI & Data Analysis, <i>INSTANT Center</i>	2025
Programming Fundamentals with C++, <i>Route Academy</i>	2024
Excel for Data Analysis, <i>Udemy</i>	2024
